

Recurrent Neural Networks (RNNs)

 Why do we need *Sequential Modeling*?

Examples of Sequence data

Speech Recognition

Machine Translation

Language Modeling

Named Entity Recognition

Sentiment Classification

Video Activity Analysis

WHAT'S
NEXT?

Input Data

Hello, I am Pankaj.

Recurrent neural ? based ? model

Pankaj lives in Munich

There is nothing to like in this movie.

Output

This is RNN

Hallo, ich bin Pankaj.

हैलो, मैं पंकज हूँ।

Sentiment
Analysis

Not only the fan was expensive,
but it was broken when it
arrived.

Issue # 1: No fixed size of neurons in a layer

Issue # 2: Too much computation

25000 words in vocabulary

how $\rightarrow [0,0,0,\dots,1,0,0,\dots,0]$

are $\rightarrow [0,1,0,0,0,\dots,0,0,\dots,0]$

you? $\rightarrow [0,0,0,0,\dots,0,0,1,0,0]$

Issue # 2: Too much computation

25000 words in vocabulary

how $\rightarrow [0,0,0,\dots,1,0,0,\dots,0]$

are $\rightarrow [0,1,0,0,0,\dots,0,0,\dots,0]$

you? $\rightarrow [0,0,0,0,\dots,0,0,1,0,0]$

42000 words in vocabulary

$[0,0,0,\dots,1,0,0,\dots,0]$

$[0,0,0,\dots,1,0,0,\dots,0]$

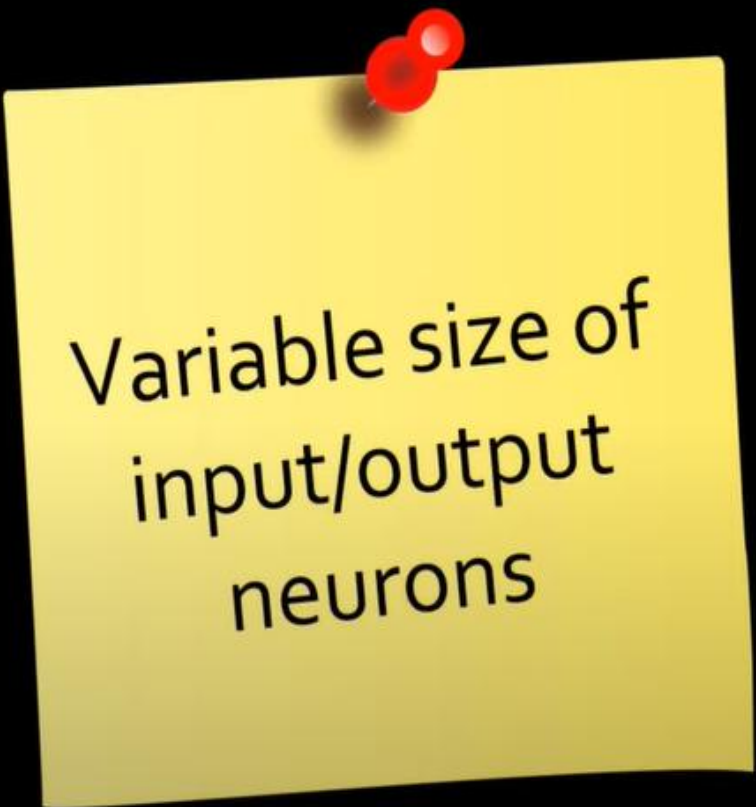

$[0,0,0,\dots,1,0,0,\dots,0]$

Vanishing Gradient Issue

$$\frac{\partial(\text{Loss})}{\partial \omega_1} = \frac{\partial(\text{Loss})}{\partial \text{Awareness}} * \frac{\partial(\text{Awareness})}{\partial \omega_1}$$

$$\partial(\text{Loss})/\partial \omega_1 = \partial(\text{Loss})/\partial \text{Awareness} * \partial(\text{Awareness})/\partial \omega_1$$

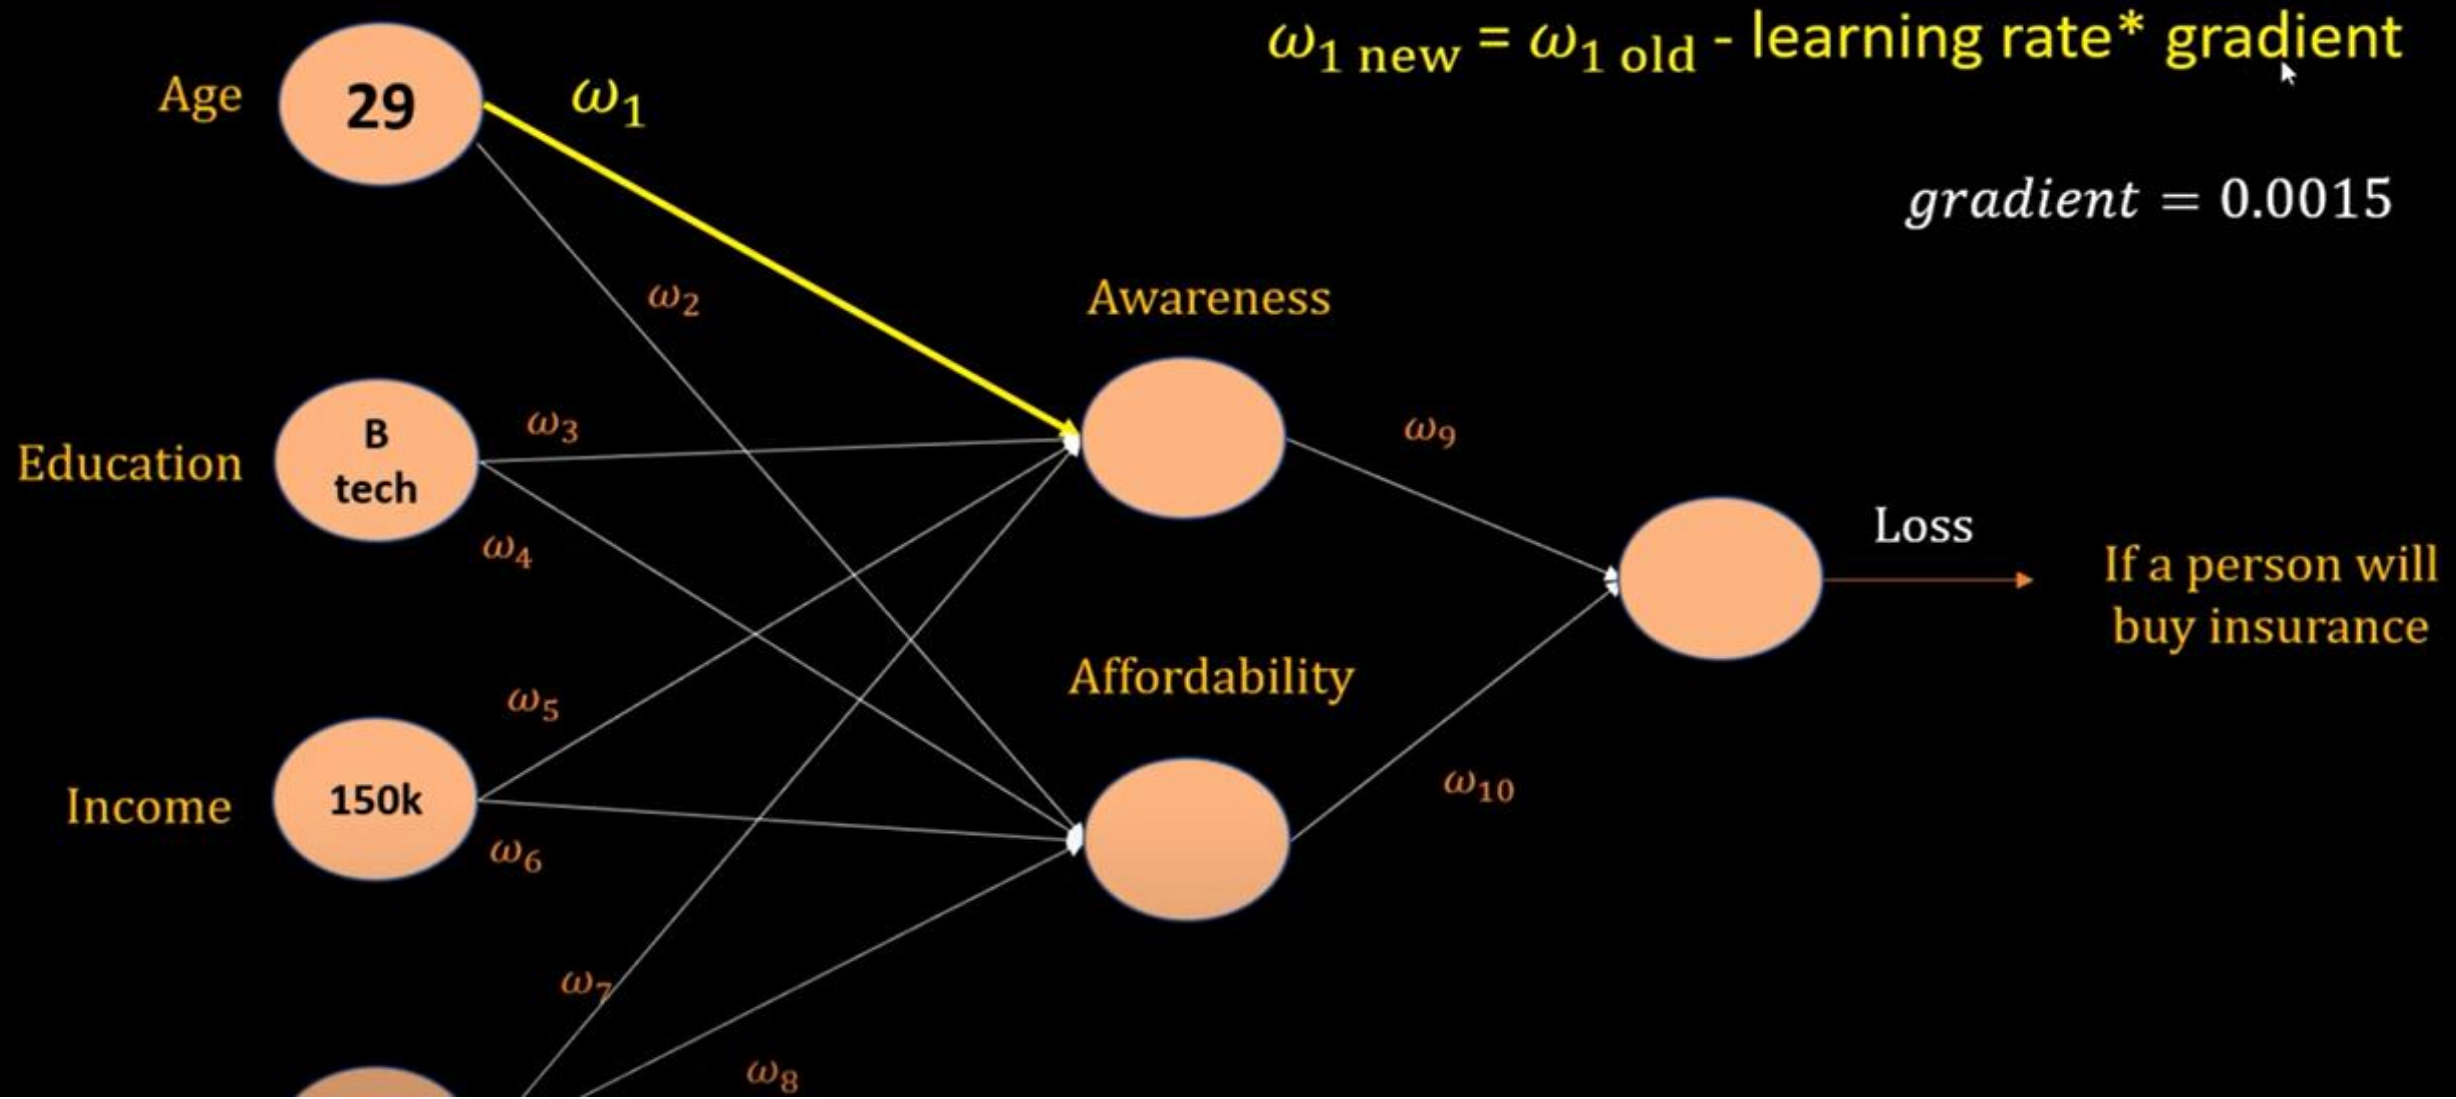

$$\text{gradient} = d1 * d2$$

$$\frac{\partial(\text{Loss})}{\partial \omega_1} = \frac{\partial(\text{Loss})}{\partial \text{Awareness}} * \frac{\partial(\text{Awareness})}{\partial \omega_1}$$

$$\text{gradient} = d1 * d2$$

$$\text{gradient} = 0.03 * 0.05$$

$$\text{gradient} = 0.0015$$

As number of hidden layers grow, gradient becomes very small and weights will hardly change . This will hamper the learning process.

Vanishing Gradients

When individual derivatives are large, the final derivative will also become huge and weights would change drastically.

Exploding Gradients

$$\text{gradient} = d1 * d2 * d3 * d4 * \dots * dn$$

Vanishing gradient problem is more prominent in very deep neural networks.

Today, due to my current job situation and family conditions, I need to take a loan.

Last year, due to my current job situation and family conditions, I had to take a loan.

Today, due to my current job situation and family conditions, I need to take a loan.

Thank You
